EDUCATION

Anil Neerukonda Institute of Technology and Sciences (ANITS)

B.Tech in Computer Science – Artificial Intelligence & Machine Learning | CGPA: 9.48/10.0

Bheemunipatnam, AP, India

Aug 2024 – May 2028

PROJECTS

EchoAI | *React, Vite, JavaScript, CSS, OpenRouter API, Llama-3-8B-Instruct, Recharts, LocalStorage* | [GitHub](#)

2025

- Built an AI-powered productivity and task management web app using the Eisenhower Matrix framework to categorize tasks by urgency and importance, helping users decide what to work on first.
- Integrated OpenRouter API with the Llama-3-8B-Instruct model to analyze tasks and suggest priorities; users add tasks via natural language and the AI converts them into structured task data automatically.
- Developed a complete personal productivity dashboard with daily planning, habit tracking, focus sessions, and analytics – visualized work patterns and focus trends using Recharts.
- Stored all user data locally using browser LocalStorage, demonstrating a fully client-side AI-assisted productivity system without requiring a backend.

Cache Mapping Simulator | *HTML5, CSS3, Vanilla JavaScript (ES6), Canvas API* | [GitHub](#)

2025

- Built an interactive browser-based simulator demonstrating cache memory mapping concepts in COA, supporting Direct Mapping, Fully Associative Mapping, and Set-Associative Mapping for comparative learning.
- Implemented visual step-by-step simulation with cache hit/miss highlighting, real-time cache state visualization, and performance metrics (hit ratio, miss ratio) rendered via the Canvas API.
- Designed customizable simulation inputs (address sequences, cache size, block size, associativity) with CSV export support for COA labs and analysis – runs entirely in the browser with no backend required.

AcademicResultTracker | *PHP, MySQL, HTML5, CSS3, Bootstrap 5, JavaScript, Chart.js, XAMPP* | [GitHub](#)

2025

- Developed a web-based Smart Student Result Management System to centrally manage and analyze student academic performance with role-based access for Students, Faculty, and Admin.
- Designed and implemented the full database architecture in MySQL – modelled normalized relational schemas translating academic requirements (marks, roles, CGPA) into technical specifications with secure access control.
- Built interactive dashboards and analytics including pass/fail statistics, subject performance analysis, CGPA estimation, and leaderboard insights using Chart.js.

TECHNICAL SKILLS

Languages: JavaScript (ES6), Python, PHP, SQL, HTML, CSS

Frameworks & Libraries: React (Vite), Bootstrap, NumPy, Pandas, Scikit-learn

Databases: MySQL, Database Design, SQL Queries & Joins

AI & APIs: LLM Integration, OpenRouter API, Prompt Engineering

Visualization: Chart.js, Recharts, Canvas API

Tools & Platforms: Git, GitHub, VS Code, XAMPP

Concepts: Machine Learning, REST APIs, Database Architecture, RDBMS, OOP, Client-side Web Applications

COMPETITIVE PROGRAMMING

LeetCode – Algorithmic Problem Solving | *Python* | [GitHub](#)

2024 – Present

- Actively solving data structures and algorithms problems in Python, covering arrays, dynamic programming, trees, graphs, and string manipulation.
- Maintaining a public repository to document solutions and track progress across difficulty levels.
